

Mine Protection Suit MPS4

Article No.: 1020047

The MPS4 mine clearance and search suit is extremely versatile and comfortable, designed to be worn by personnel who have to look for EOD/IED devices and anti personnel mines.

It provides fragmentation, blast and ballistic protection to the whole body, including back, front, side, neck, under arm protection, and lower groin protection that wraps completely under the groin - protecting from ground blast up into the suit.

The trousers are articulated at the knees, giving the user good mobility and flexibility. The sleeves are independent of the jacket, allowing them to be adjusted for different shoulder sizes, and also allowing for greater comfort and freedom of movement.

FEATURES

- Full body protection including back, front, side, neck, under arm, lower groin
- Protection level according to STANAG 2920
 $v_{50} = 450 \text{ m/s}$ (other levels on request)
- Very versatile and comfortable to wear
- Nomex® outer cover flame resistant and washable
- Full size range S, M, L and XL
- Different colours available, see next page

Helmet not included
