

Ballistic Shield on Trolley NIJ III+

Article No.: 1100301

The ballistic trolley shield NIJ III+ is a new development which has addressed the need to provide a robust, stable and highly manoeuvrable shield platform for shield deployment whilst at the same time enabling rapid dismounting from the platform for hand held operations.

The trolley is made from box section mild steel and comprises three parts which are bolted together with three 8mm thumb screws to enable quick deployment. The two rear wheels are braked and all four solid rubber wheels have independent steering. The shield is securely mounted onto the quad trolley by means of parallel vertical slotted bars and can be mounted and dismounted within seconds without the need for any tools.

NIJ3+ is an unofficial level that covers the traditional NIJ Level III performance for 6 strikes of 7.62 x 51 mm NATO Ball (US designation M80 Ball) and also the widely recognised threat from AK47 MSC 7.62 x 39 mm round.

Technical Data

Protection Level	NIJ III+
Material	UHMWPE
Size Shield approx. (cm)	160 x 60
Size Viewport (cm)	25 x 10
Weight Shield approx. (kg)	< 26
Weight Trolley approx. (kg)	< 26

Colour

Black
